

# GameDrive® 10

## PRODUCT OVERVIEW

*GameDrive offers convenient storage of video games, increased playback speed, and more game support than any competitor product on the market.*

GameDrive 10 is a CD emulation software that copies a CD or DVD as a compressed image, or “virtual disc,” and saves the file either to a computer’s hard drive or to a portable medium. This virtual disc can be played in place of the original disc, directly on a computer’s hard drive, in one of up to 23 “virtual drives” that GameDrive creates.

Because a hard drive has much faster access times than a CD-ROM drive, GameDrive acts as an electronic supercharger, with playback performance up to 200 times faster than that of physical discs, greatly accelerating the loading times of video games and large graphics.

GameDrive’s virtual discs can be organized, archived, sent by email, and played any number of times and shared among any number of users while original discs are stored for safekeeping. They can be searched and browsed from the GameDrive interface and easily transported on a laptop computer, flash card, or rewritable CD.

GameDrive is compatible with more of the top PC-based video games than any competitor product, and its optional Live Update service ensures access to the most up-to-date game support, software patches, and fixes.

## FEATURES & BENEFITS

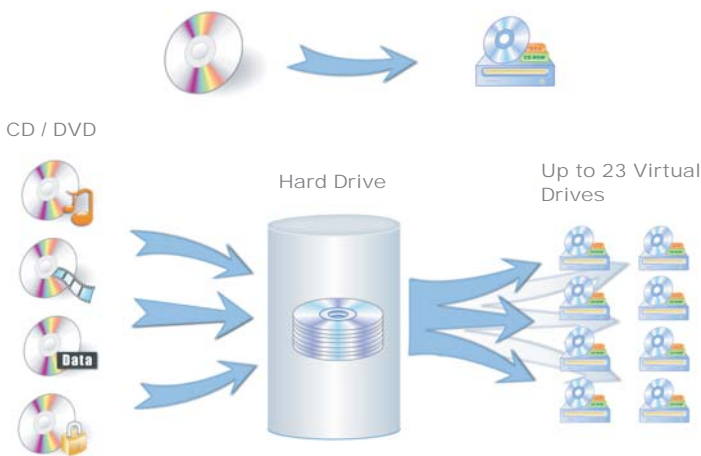

- **Video Game Compatibility:** GameDrive supports more games than any other CD emulator, including such titles as Madden 2006, Dungeon Siege, Sacred Gold, Advent Rising, and Doom 3
- **Optimal Performance:** Files run directly on the hard drive many times faster than they would from a physical disc. And GameDrive contains RapidCache® technology, which reduces access times by 75%
- **Live Update:** Live Update subscription service offers up-to-date game support, patches, and fixes
- **Data Backup:** Protect your CDs from loss, damage, or theft by creating high-quality, compressed digital copies and saving them to your hard drive
- **CD/DVD Archiving:** Virtual discs can be renamed, catalogued, and managed from a user-friendly interface
- **Custom VCD Creation:** Make a virtual CD file that contains documentation, expansion packs, and custom programs
- **Portability:** Virtual disks can be easily transported on laptop computer hard drives, flash cards, rewritable CDs, zip discs, and other common digital storage media
- **Multiple Disc Play:** Up to 23 programs can run simultaneously in virtual drives. There’s no need to swap out physical discs
- **Copyright Protection Support:** GameDrive supports DVD SecuROM, SecuROM 7, Starforce 3, Safedisk1, SafeDisk2, and LaserLock

# GameDrive® 10

## TECHNICAL SPECIFICATIONS

GameDrive copies a CD or DVD into a single, compressed disc-image file, or virtual disc. A driver in the software fools Windows into treating the virtual disc as a physical CD or DVD in a CD-ROM drive. You can create up to 23 virtual drives (D: through Z:) and an unlimited number of virtual discs.

Once GameDrive has copied a CD, a virtual image of that disc appears in the software interface. You launch the virtual disc

by inserting it in an open virtual drive or by double clicking a desktop shortcut to the file. With up to 23 virtual drives available instead of just one physical CD/DVD-ROM drive, you can run **multiple virtual discs** at any time.

GameDrive uses FarStone's Rapid Cache technology to **optimize playback** of VCD images, and supports CD-ROMs, audio CDs, mixed-mode CDs, photo CDs, video CDs (DVD-ROMs data-mode), unencrypted DVD videos, as well as **all major copyright protections**, such as DVD SecuROM, SecuROM 7, Starforce 3, Safedisk1, SafeDisk2, and LaserLock.

## SYSTEM REQUIREMENTS

- CPU: Intel Pentium 133 or higher
- RAM: 64MB or more
- Hard Drive: 25MB free space
- Operating System: Windows 2000 and XP platforms
