

# RestoreIT® Network

*RestoreIT Network lets you reset your operating system and files to any one of hundreds of customizable backup points.*

## PRODUCT OVERVIEW

RestoreIT Network is a powerful, easy-to-use data backup application that keeps ongoing “snapshots” of all systems on a Microsoft Workgroup. This allows administrators, librarians, and teachers to remotely reset one or all computers in an office or classroom to an original operating system setting. Once the software is installed, computer systems can be configured to reset themselves periodically and automatically.

RestoreIT Network loads before Windows® on client machines, and will run even when Windows cannot boot up. Pressing the spacebar during the boot process launches the software, which can then restore a system to any backup point, even when a computer is not connected to a network!

Designed for educational institutions, businesses, and government agencies, RestoreIT Network operates on TCP/IP networks and offers a wide range of network backup, management, and monitoring tools like text messaging, remote shutdown and restart, remote diagnostics and data recovery, process inspection, remote logging, password protection, and even remote control of linked computers.

## FEATURES & BENEFITS

- **Ease of Use:** The software remains hidden on the client machine and has a simple, intuitive user interface
- **Remote Monitoring and Control:** View network connections, log client computer program use, shut down and start up remote systems, and monitor client screens in real time for remote diagnostics
- **Total System Recovery:** Remotely restore the operating system of a networked computer damaged by a Windows crash, virus attack, or software bug
- **Automated Backup:** Back up entire networked systems with a compressed archive of files, programs, and partition and security information
- **Customizable Scheduler:** Customize your restore points: every time you reboot, every hour, every day, or whenever you need them
- **Password Protection:** Easily lock down administrator applications and client systems
- **Unlimited Incremental Restore Points:** Select any one of hundreds of backup points for a high degree of accuracy and control
- **Multiple Backup Options:** Back up your computer's hard drive to a protected local partition or to secure external media (CD/DVD)

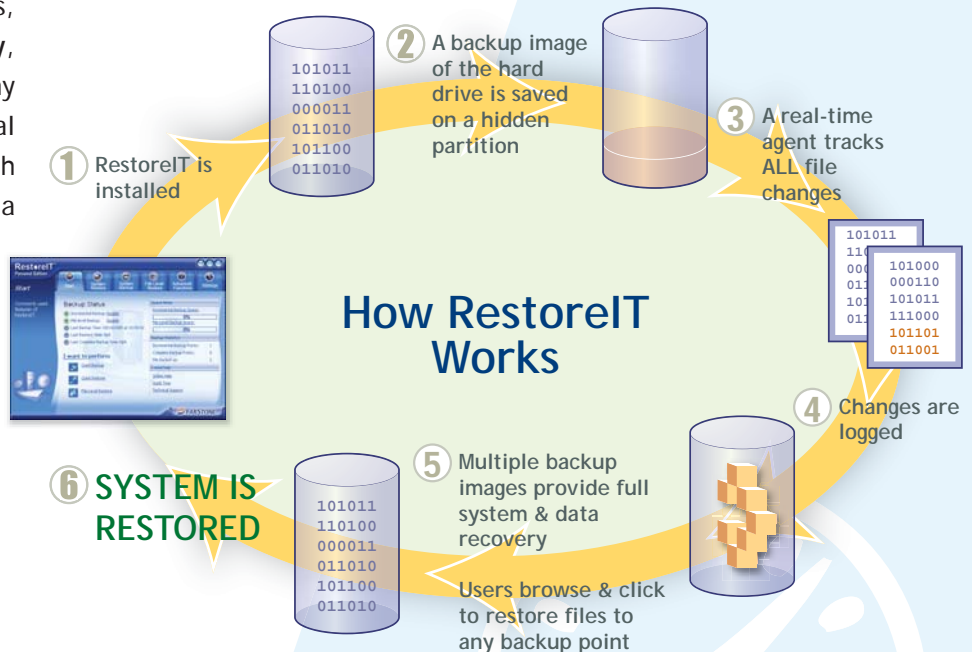

# RestoreIT® Network

## TECHNICAL SPECIFICATIONS

RestoreIT resides between the system BIOS of a PC and its operating system. During installation, RestoreIT creates a hidden partition where it will begin saving complete (static) and partial (incremental) restore points. Unlike other data backup utilities, RestoreIT enables both **file-level recovery**, which allows you to undo changes to any given file by reverting to its last incremental backup point, and **system recovery**, which restores every file on a hard drive to a selected static backup point.

## SYSTEM REQUIREMENTS

- CPU: Intel Pentium 133 or higher
- RAM: 256MB or more
- Hard Drive: 420MB free space for the program and partition
- Operating System: Windows 2000 and XP platforms

RestoreIT is patent-protected technology.

Patents Awarded or Pending: 09/750,160, 09/717,059, 09/814,873, 09/885,499.
